

### ***Project Description: Arcoplast Antimicrobial Ceiling Liners***

This cooler ceiling was our second Arcoplast Ceiling Liner project for Land O'Lakes in Spencer Wisconsin. This ceiling, comprised mostly of panels 8' wide x 15'-8" long, was on the 3rd floor of the building. We maneuvered the panels into the building through a knock-out panel on the 3rd floor with a telescoping forklift. The cooler was sealed off from the rest of the facility with temporary walls to allow production to operate continually throughout the duration of the project. This was a direct attached ceiling liner system over the existing concrete structure. The ceiling panels are set in adhesive and mechanically fastened around the perimeters. All seams/joints are then hermetically sealed with the unique Arcoplast batten cover system. This Arcoplast ceiling will ensure Land O'Lakes a clean, safe cooler for many years to come.

Originally (back in the early 1920s) Land O'Lakes was an organization by the name of Minnesota Cooperative Creameries Association. Land O'Lakes is the largest brand of deli cheese in the United States. Land O'Lakes makes millions of pounds of cheese every year. Almost half of all American cheese sold in the deli is Land O'Lakes. Land O'Lakes offers a variety of butter, milk, cheeses, cream, cottage cheese, yogurt, sour cream, spreads, and other fine products.
